# THE GEOLOGICAL SOCIETY

The Geological Society of London was founded in 1807 and is the oldest geological society in the world. It received its Royal Charter in 1825 for the purpose of 'investigating the mineral structure of the Earth' and is now Britain's national society for geology.

Both a learned society and a professional body, the Geological Society is recognized by the Department of Trade and Industry (DTI) as the chartering authority for geoscience, able to award Chartered Geologist status upon appropriately qualified Fellows. The Society has a membership of 8600, of whom about 1500 live outside the UK.

Fellowship of the Society is open to persons holding a recognized honours degree in geology or a cognate subject and who have at least two years' relevant postgraduate experience, or not less than six years' relevant experience in geology or a cognate subject. A Fellow with a minimum of five years' relevant postgraduate experience in the practice of geology may apply for chartered status. Successful applicants are entitled to use the designatory postnominal CGeol (Chartered Geologist). Fellows of the Society may use the letters FGS. Other grades of membership are available to members not yet qualifying for Fellowship.

The Society has its own Publishing House based in Bath, UK. It produces the Society's international journals, books and maps, and is the European distributor for publications of the American Association of Petroleum Geologists (AAPG), the Society for Sedimentary Geology (SEPM) and the Geological Society of America (GSA). Members of the Society can buy books at considerable discounts. The Publishing House has an online bookshop (<http://bookshop.geolsoc.org.uk>).

Further information on Society membership may be obtained from the Membership Services Manager, The Geological Society, Burlington House, Piccadilly, London W1V 0JU (e-mail: [enquiries@geolsoc.org.uk](mailto:enquiries@geolsoc.org.uk); tel: +44 (0)171 434 9944).

The Society's Web Site can be found at <http://www.geolsoc.org.uk/>. The Society is a Registered Charity, number 210161.

# Contents

COSGROVE, J. W. Forced folds and fractures: An introduction	1
COSGROVE, J. W. & AMEEN, M. S. A comparison of the geometry, spatial organization and fracture patterns associated with forced folds and buckle folds	7
<b>Section 1: Numerical analysis and field study of fractures associated with compactional forced folds</b>	
COOKE, M. L., MOLLEMA, P. N., POLLARD, D. D. & AYDIN, A. Interlayer slip and joint localization in East Kaibab Monocline, Utah: field evidence and results from numerical modelling	23
LAUBACH, S. E., SCHULTZ-ELA, D. D. & TYLER, R. Differential compaction of interbedded sandstone and coal	51
COSGROVE, J. W. & HILLIER, R. D. Forced-fold development within Tertiary sediments of the Alba Field, UKCS: evidence of the differential compaction and post-depositional sandstone remobilization	61
<b>Section 2: Forced folding in extensional environments</b>	
MAURIN, J.-C., NIVIERE, B. Extensional forced folding and décollement of the pre-rift series along the Rhine graben and their influence on the geometry of the syn-rift sequences	73
KELLER, J. V. A. & LYNCH, G. Displacement transfer and forced folding in the Maritimes basin of Nova Scotia, eastern Canada	87
TIBALDI, A. & VEZZOLI, L. Late Quaternary monoclinical folding induced by caldera resurgence at Ischia, Italy	102
MANSFIELD, C. S. & CARTWRIGHT, J. A. Stratal fold patterns adjacent to normal faults: observations from the Gulf of Mexico	115
<b>Section 3: Forced folding in compressional and strike-slip environments</b>	
COUPLES, G. D. & LEWIS, H. Effects of interlayer slip in model forced folds	129
WICKS, J. L., DEAN, S. L. & KULANDER, B. R. Regional tectonics and fracture patterns in the Fall River Formation (Lower Cretaceous) around the Black Hills foreland uplift, western South Dakota and northeastern Wyoming	145
TEPER, L. Geometry of fold arrays in the Silesian–Cracovian region of southern Poland	167
WATKINSON, A. J. & HOOPER, P. R. Primary and ‘forced folds’ of the Columbia River basalt province, eastern Washington, USA	181
<b>Section 4: Temporal and spatial relationship between forced folds and buckle folds, crustal-scale folds and fold/fracture relationships</b>	
SATTARZADEH, Y., COSGROVE, J. W. & VITA-FINZI, C. The interplay of faulting and folding during the evolution of the Zagros deformation belt	187
ŠTÍPSKÁ, P., SCHULMANN, K. & HÖCK, V. Complex metamorphic zonation of the Thaya dome: result of buckling and gravitational collapse of an imbricated nappe sequence	197
LISLE, R. J. Predicting patterns of strain from three-dimensional fold geometries: neutral surface folds and forced folds	213
Index	223

## Dedicated to Gilbert Wilson (1899–1987)

In appreciation of his inspirational teaching and outstanding contribution to Structural Geology.
