Journal of the Geological Society

Chief Editor: M.J. Le Bas

Published bi-monthly, the Journal of the Geological Society enjoys a very wide international circulation and has been published continuously since 1845. It is a leading international organ for significant research in all branches of the geological sciences. It is the medium of choice for publication of work by internationally recognized authorities.

Papers are accepted from both Fellows and non-Fellows. A Short Papers section has been introduced for rapid publication of topical information.

Quarterly Journal of Engineering Geology

Scientific Editor: A.B. Hawkins

This is a journal of the Geological Society with a wide international circulation. Original papers are accepted from Fellows and non-Fellows working in the UK or overseas. The journal is designed for papers which deal with any of the subjects within the field of geology as applied to civil engineering, mining practices and water resources, including rock mechanics and geotechnics. Its wide scope also includes applied sedimentology, pedology, geohydrology and the engineering application of geophysics. Case histories and review articles are also published.

For both the Journal of the Geological Society and the Quarterly Journal of Engineering Geology, typescripts for publication, editorial enquiries and correspondence should be sent to: The Editorial Department, Geological Society Publishing House, Unit 7, Brassmill Enterprise Centre, Brassmill Lane, Bath BA1 3JN. Tel 0225-445046.

Enquiries and business correspondence relating to sales and subscription matters should be sent to: Journals Subscription Department, Geological Society, Burlington House, Piccadilly, London W1V 0JU. Tel: 01-434-9944.

Fellows and other members of the Geological Society enjoy substantial reduction on the price of books published by the Society.

Fellowship dues include a subscription to one of the above mentioned journals or the Journal of Marine and Petroleum Geology (published jointly with Butterworths). Several other journals can be subscribed to by Fellows at substantially reduced cost where the Society has an agreement. Fellowship is open to geologists worldwide; further information is available from the Executive Secretary, Geological Society, Burlington House, Piccadilly, London W1V 0JU.

Geology Today

This journal serves professional geologists wishing to keep abreast of developments in areas outside their own field, as well as amateur geologists, students and their instructors. The Editorial Board selects several articles for each issue on various topics of current interest in both pure and applied geology, to provide both specialists and non-specialists with clear and readable information covering a wide scope. The journal also features shorter notes, news of meetings, exhibitions and field excursions, contributions from foreign correspondents and book reviews.
