## THE GEOLOGICAL SOCIETY

The Geological Society of London was founded in 1807 for the purposes of 'investigating the mineral structures of the earth'. It received its Royal Charter in 1825. The Society promotes all aspects of geological science by means of meetings, special lectures and courses, discussions, specialist groups, publications and library services.

It is expected that candidates for Fellowship will be graduates in geology or another earth science, or have equivalent qualifications or experience. All Fellows are entitled to receive for their subscription one of the Society's three journals: *The Quarterly Journal of Engineering Geology*, the *Journal of the Geological Society* or *Marine and Petroleum Geology*. On payment of an additional sum on the annual subscription, members may obtain copies of another journal.

Membership of the specialist groups is open to all Fellows without additional charge. Enquiries concerning Fellowship of the Society and membership of the specialist groups should be directed to the Executive Secretary, The Geological Society, Burlington House, Piccadilly, London W1V 0JU.

## Acknowledgements

On behalf of the Geological Society Petroleum Group and PESGB, we thank the companies and individuals concerned with this volume for their generous support and their time and effort in presenting and publishing these extensive studies on classic petroleum provinces. The authors clearly show that these highly productive hydrocarbon provinces are not only classic petroleum provinces, but also classic geological provinces.

Many papers in this collection were first presented at a Geological Society (in association with the Petroleum Exploration Society of Great Britain) special two-day meeting held at the Royal Commonwealth Society and the Geological Society, Burlington House, London in May 1988. The meeting was truly international in a geographical, exploration and explorationist sense. The conference delegates (and hopefully the readers of the proceedings) are appreciative of the efforts of all the speakers who literally did come from the 'four corners of the world'. The effectiveness of the five sessions of the conference owed much to their chairmen: Richard Hardman; Ian Vann; John Brooks; David Roberts and Jim Brooks, whom we thank. The staff of the Geological Society and PESGB are also thanked for assistance, administration and organisation before and during the meeting.

Compiling the volume has been made relatively easy by the excellent response by most of the authors in providing good manuscript copy soon after the conference. The other authors are thanked for their special efforts — against all sorts of difficulties, work loads, distractions, in-house politics, etc, — that they finally made the publication. Alas, a very few did not make it!

The papers in this volume have all been refereed and some amended and corrected by the authors. The editor is most grateful to all those referees who undertook the onerous task of refereeing the papers. The volume has benefited from their comments and suggestions.

This volume has been published 'in-house' by the Geological Society's Publishing House and we thank the staff — particularly David Ogden (Staff Editor) — for all their efforts and patience in the preparation of the book. Much work has contributed to the preparation of the volume, especially by the authors and we hope that readers will benefit in many ways from reading (and re-reading) the volume.

There is much oil and gas still to be produced and found in the classic petroleum provinces and we hope these proceedings will interest and assist you and your company. Our main hope is that the volume will inform everyone of some of the recent advances in petroleum geology and petroleum exploration. If the volume does this it will have been worthwhile.
