Faulting, Fault Sealing and Fluid Flow in Hydrocarbon Reservoirs
Faulting, Fault Sealing and Fluid Flow in Hydrocarbon Reservoirs

EDITED BY

G. JONES, Q. J. FISHER

AND

R. J. KNIPE

Rock Deformation Research
Department of Earth Sciences
The University of Leeds
UK

1998
Published by
The Geological Society
London
The Society was founded in 1807 as The Geological Society of London and is the oldest geological society in the world. It received its Royal Charter in 1825 for the purpose of ‘investigating the mineral structure of the Earth’. The Society is Britain’s national society for geology with a membership of around 8500. It has countrywide coverage and approximately 1500 members reside overseas. The Society is responsible for all aspects of the geological sciences including professional matters. The Society has its own publishing house, which produces the Society’s international journals, books and maps, and which acts as the European distributor for publications of the American Association of Petroleum Geologists, SEPM and the Geological Society of America.

Fellowship is open to those holding a recognized honours degree in geology or cognate subject and who have at least two years’ relevant postgraduate experience, or who have not less than six years’ relevant experience in geology or a cognate subject. A Fellow who has not less than five years’ relevant postgraduate experience in the practice of geology may apply for validation and, subject to approval, may be able to use the designatory letters C Geol (Chartered Geologist).

Further information about the Society is available from the Membership Manager, The Geological Society, Burlington House, Piccadilly, London W1V 0JU, UK. The Society is a Registered Charity, No. 210161.
## Contents

**Knipe, R. J., Jones, G. & Fisher, Q. J.** Faulting, fault sealing and fluid flow in hydrocarbon reservoirs: an introduction vii

### Fault array mapping, geometry and evolution

**Townsend, C., Firth, I. R., Westerman, R., Kirkevollen, L., Härde, M. & Andersen, T.** Small seismic-scale fault identification and mapping 1

**Steen, Ø., Sverdrup, E. & Hanssen, T. H.** Predicting the distribution of small faults in a hydrocarbon reservoir by combining outcrop, seismic and well data 27

**Marchal, D., Guiraud, M., Rives, T. & van den Driessche, J.** Space and time propagation processes of normal faults 51

### Faulting processes and fault seal characterization

**Adams, J. T. & Dart, C.** The appearance of potential sealing faults on borehole images 71

**Fisher, Q. J. & Knipe, R. J.** Fault sealing processes in siliciclastic sediments 117

**Krooss, B. M., Schloemer, S. & Ehrlich, R.** Experimental investigation of molecular transport and fluid flow in unfaulted and faulted pelitic rocks 135

**Faulkner, D. R. & Rutter, E. H.** The gas permeability of clay-bearing fault gouge at 20°C 147

### Experimental and numerical modelling of deformation and fluid flow

**Mailiot, B., Cowie, P. & Lague, D.** Simulating polyphase faulting with a tensorial 3D model of fault growth 209

**Fleming, C. G., Couples, G. D. & Haszeldine, R. S.** Thermal effects of fluid flow in steep fault zones 217

**Henderson, J. R.** The influence of fault compaction on fault zone evolution 231

**Leary, P. C.** Relating macroscale rock–fluid interaction to macroscale fluid flow structure 243

**Lesnic, D., Elliott, L., Ingham, D. B., Knipe, R. J. & Clennell, B.** An inverse problem to determine the piecewise homogeneous hydraulic conductivity within rocks 261

### Structure and seal analysis of hydrocarbon fields

**Knaí, T. A. & Knipe, R. J.** The impact of faults on fluid flow in the Heidrun Field 269

**Ottesen Ellevset, S., Knipe, R. J., Svava Olsen, T., Fisher, Q. J. & Jones, G.** Fault controlled communication in the Sleipner Vest Field, Norwegian Continental Shelf; detailed, quantitative input for reservoir simulation and well planning 283

**Ericsson, J. B., McKean, H. C. & Hooper, R. J.** Facies and curvature controlled 3D fracture models in a Cretaceous carbonate reservoir, Arabian Gulf 299

**Index** 313
