

The Oil and Gas Habitats of the South Atlantic

edited by

N. R. Cameron (Imperial College, UK), R. H. Bate (Lacustrine Basin Research Ltd, UK) and V. S. Clure (Technical Outsourcing, UK)

The South Atlantic continues to be a globally important focus for the oil and gas industry. This book is, therefore, a timely reference work that provides both the geological background needed to understand the habitats of the discoveries of Nigeria, Angola and Brazil, and the background data required for preparing work programmes.

The book presents five thematic sections: 'The geological and geophysical framework of the South Atlantic', 'Oil and gas habitats', 'Organic geochemistry studies', 'Biostratigraphic applications' and 'Exploration studies and issues'. Extensive use is made of colour and, for the first time in this series, a CD-ROM is included that provides a tectonic map of the South Atlantic as well as play maps of both Brazil and West Africa.
