Special Publication reviewing procedures
The Society makes every effort to ensure that the scientific and production quality of its books matches that of its journals. Since 1997, all book proposals have been refereed by specialist reviewers as well as by the Society's Publications Committee. If the referees identify weaknesses in the proposal, these must be addressed before the proposal is accepted.

Once the book is accepted, the Society has a team of series editors (listed above) who ensure that the volume editors follow strict guidelines on refereeing and quality control. We insist that individual papers can only be accepted after satisfactory review by two independent referees. The questions on the review forms are similar to those for Journal of the Geological Society. The referees' forms and comments must be available to the Society's series editors on request.

Although many of the books result from meetings, the editors are expected to commission papers that were not presented at the meeting to ensure that the book provides a balanced coverage of the subject. Being accepted for presentation at the meeting does not guarantee inclusion in the book.

Geological Society Special Publications are included in the ISI Science Citation Index, but they do not have an impact factor, the latter being applicable only to journals.

More information about submitting a proposal and producing a Special Publication can be found on the Society's web site: www.geolsoc.org.uk.

THE GEOLOGICAL SOCIETY

The Geological Society of London was founded in 1807 and is the oldest geological society in the world. It received its Royal Charter in 1825 for the purpose of ‘investigating the mineral structure of the Earth’ and is now Britain’s national society for geology.

Both a learned society and a professional body, the Geological Society is recognized by the Department of Trade and Industry (DTI) as the chartering authority for geoscience, able to award Chartered Geologist status upon appropriately qualified Fellows. The Society has a membership of 9099, of whom about 1500 live outside the UK.

Fellowship of the Society is open to persons holding a recognized honours degree in geology or a cognate subject, or not less than six years’ relevant experience in geology or a cognate subject. A Fellow with a minimum of five years’ relevant postgraduate experience in the practice of geology may apply for chartered status. Successful applicants are entitled to use the designatory postnominal CGeol (Chartered Geologist). Fellows of the Society may use the letters FGs. Other grades of membership are available to members not yet qualifying for Fellowship.

The Society has its own publishing house based in Bath, UK. It produces the Society’s international journals, books and maps, and is the European distributor for publications of the American Association of Petroleum Geologists, (AAPG), the Society for Sedimentary Geology (SEPM) and the Geological Society of America (GSA). Members of the Society can buy books at considerable discounts. The Publishing House has an online bookshop (http://bookshop.geolsoc.org.uk).

Further information on Society membership may be obtained from the Membership Services Manager, The Geological Society, Burlington House, Piccadilly, London W1V 0JU (E-mail: enquiries@geolsoc.org.uk; tel: +44 (0)207 434 9944).

The Society’s Web Site can be found at http://www.geolsoc.org.uk/. The Society is a Registered Charity, number 210161.

It is recommended that reference to all or part of this book should be made in one of the following ways:

Acknowledgements

This volume is derived from ‘Orogenesis in the Outback’, a conference held in Alice Springs, Central Australia in July 1999 under the auspices of the Specialist Group in Geochemistry, Mineralogy and Petrology of the Geological Society of Australia with the support of the Tectonic Studies Group (UK). Many of the ideas, concepts and examples discussed in this volume were first presented at this conference and its associated field trips, where they generated a great deal of discussion and debate, contributing to a successful and enjoyable experience for all. We hope that this volume will convey these ideas to a wider audience.

We are particularly indebted to the Geological Survey of the Northern Territory for their financial, logistical and moral support in the organization and running of the Alice Springs conference. Further financial support was provided by the Australian Crustal Research Centre, Normandy NFM, the Monash University Bookshop Board, IGCP Project 368, Pasminco Exploration, Acacia Mining, the Victorian Division of the Geological Society of Australia, and the Northern Territory Convention Bureau. The attendance of students at the conference was supported by the Geological Society of Australia Specialist Groups in Tectonics and Structural Geology, and Solid Earth Geophysics, as well as the Victoria, South Australia, Western Australia and Tasmania Divisions of the Geological Society of Australia.

This volume would not have come together without the help and support of the staff at the Geological Society Publishing House, in particular Angharad Hills, Diana Swan and Andy Morton.

Referees

The editors would like to thank the following people for their assistance with the reviewing of papers submitted to this Special Publication:

Chris Beaumont
Peter Betts
