

Index

The numbers below refer to pages. Only one page reference is given in each chapter or paper, to the most convenient page in it. Names of persons refer only to those concerned with this volume as contributors or editors. Only familiar groups of plants or animals, anglicized and with the formal names of taxa in brackets where necessary, are indexed. The systematic arrangement of taxa in Part II is not repeated in the index which, however, does include some synonyms, groups of uncertain systematic position and groups not treated in this volume. Stratigraphical names, and discussion of them, are to be found in the Introduction, pp. 3–11. Editors of the chapters comprising Part II are listed on p. 827.
