Subsurface Sediment Mobilization
Special Publication reviewing procedures

The Society makes every effort to ensure that the scientific and production quality of its books matches that of its journals. Since 1997, all book proposals have been refereed by specialist reviewers as well as by the Society’s Books Editorial Committee. If the referees identify weaknesses in the proposal, these must be addressed before the proposal is accepted.

Once the book is accepted, the Society has a team of Book Editors (listed above) who ensure that the volume editors follow strict guidelines on refereeing and quality control. We insist that individual papers can only be accepted after satisfactory review by two independent referees. The questions on the review forms are similar to those for *Journal of the Geological Society*. The referees’ forms and comments must be available to the Society’s Book Editors on request.

Although many of the books result from meetings, the editors are expected to commission papers that were not presented at the meeting to ensure that the book provides a balanced coverage of the subject. Being accepted for presentation at the meeting does not guarantee inclusion in the book.

Geological Society Special Publications are included in the ISI Index of Scientific Book Contents, but they do not have an impact factor, the latter being applicable only to journals.

More information about submitting a proposal and producing a Special Publication can be found on the Society’s web site: www.geolsoc.org.uk.

It is recommended that reference to all or part of this book should be made in one of the following ways:

Subsurface Sediment Mobilization

EDITED BY

P. VAN RENSBERGEN
Ghent University, Belgium

R.R. HILLIS
University of Adelaide, Australia

A.J. MALTMAN
University of Wales, UK

and

C.K. MORLEY

The Geological Society
London
The Geological Society of London (GSL) was founded in 1807. It is the oldest national geological society in the world and the largest in Europe. It was incorporated under Royal Charter in 1825 and is Registered Charity 210161.

The Society is the UK national learned and professional society for geology with a worldwide Fellowship (FGS) of 9000. The Society has the power to confer Chartered status on suitably qualified Fellows, and about 2000 of the Fellowship carry the title (CGeol). Chartered Geologists may also obtain the equivalent European title, European Geologist (EurGeol). One fifth of the Society’s fellowship resides outside the UK. To find out more about the Society, log on to www.geolsoc.org.uk.

The Geological Society Publishing House (Bath, UK) produces the Society’s international journals and books, and acts as European distributor for selected publications of the American Association of Petroleum Geologists (AAPG), the American Geological Institute (AGI), the Indonesian Petroleum Association (IPA), the Geological Society of America (GSA), the Society for Sedimentary Geology (SEPM) and the Geologists’ Association (GA). Joint marketing agreements ensure that GSL Fellows may purchase these societies’ publications at a discount. The Society’s online bookshop (accessible from www.geolsoc.org.uk) offers secure book purchasing with your credit or debit card.

To find out about joining the Society and benefiting from substantial discounts on publications of GSL and other societies worldwide, consult www.geolsoc.org.uk, or contact the Fellowship Department at: The Geological Society, Burlington House, Piccadilly, London W1J 0BG: Tel. +44 (0)20 7434 9944; Fax +44 (0)20 7439 8975; E-mail: enquiries@geolsoc.org.uk.

For information about the Society’s meetings, consult Events on www.geolsoc.org.uk. To find out more about the Society’s Corporate Affiliates Scheme, write to enquiries@geolsoc.org.uk.

# Contents

**MALTMAN, A.J. & BOLTON, A.** How sediments become mobilized  

**Shallow subsurface sediment mobilization**  
**Owen, G.** Load structures: gravity-driven sediment mobilization in the shallow subsurface  
**HARRISON, P. & MALTMAN, A.J.** Numerical modelling of reverse-density structures in soft non-Newtonian sediments  
**PARIZE, O. & FRIES, G.** The Vocontian elastic dykes and skills: a geometric model  
**BANKWITZ, R., BANKWITZ, E., BRAVER, K., KAMPF, H. & STORR, M.** Deformation structures in Pli- and Pleistocene sediments (NW Bohemia, Central Europe)  
**LEDÉSERT, B., BURET, C., CHANIER, F., FERRIÈRE, J. & RECOURT, P.** Tubular structures of northern Wairarapa (New Zealand) as possible examples of ancient fluid expulsion in an accretionary prism: evidence from field and petrographical observations  
**DRAGANITS, E., GRASEMANN, B. & SCHMID, H.P.** Fluidization pipes and spring pits in a Gondwanan barrier-island environment: Groundwater phenomenon, palaeo-seismicity or a combination of both?  
**HURST, A., CARTWRIGHT, J. & DURANTI, D.** Fluidization structures produced by upward injection of sand through a sealing lithology  
**LOSETH, H., WENSAAS, L., ARNTSEN, B. & HOVLAND, M.** Gas and fluid injection triggering shallow mud mobilization in the Hordaland Group, North Sea  
**PRALLE, N., KÜLZER, M. & GUEDEHUS, G.** Experimental evidence on the role of gas in sediment liquefaction and mud volcanism  
**GAY, A., LOPEZ, M., COCHONAT, P., SULTAN, N., CAUQUIL, E. & BRIGAUD, F.** Sinuous pockmark belt as indicator of a shallow buried turbiditic channel on the lower slope of the Congo basin, West African margin  
**NOUZÉ, H. & BALITZER, A.** Shallow bottom-simulating reflectors on the Angola margin, in relation with gas and gas hydrate in the sediments  

**Polygonal faults and sediment mobilization**  
**CARTWRIGHT, J., JAMES, D. & BOLTON, A.** The genesis of polygonal fault systems: a review  
**NICOL, A., WALSH, J.J., WATTERSON, J., NELL, P.A.R. & BRETAN, P.** The geometry, growth and linkage of faults within a polygonal fault system from South Australia  
**STUEVOLD, L.M., FAERSETH, R.B., ARNSEN, L., CARTWRIGHT, J. & MOLLER, N.** Polygonal faults in the Ormen Lange Field, Møre Basin, offshore Mid Norway  
**MERTENS, J., VANDENBERGHE, N., WOUTERS, L. & SINTUBIN, M.** The origin and development of joints in the Boom Clay Formation (Rupelian) in Belgium
