

## Contents

|  |     |
|--|-----|
| Preface  | vii |
| PYE, K. & CROFT, D. J. Forensic geoscience: introduction and overview  | 1   |
| MURRAY, R. C. Forensic geology: yesterday, today and tomorrow  | 7   |
| FENNING, P. J. & DONNELLY, L. J. Geophysical techniques for forensic investigation   | 11  |
| WATTERS, M. & HUNTER, J. R. Geophysics and burials: field experience and software development  | 21  |
| SCOTT, J. & HUNTER, J. R. Environmental influences on resistivity mapping for the location of clandestine graves   | 33  |
| HANSON, I. D. The importance of stratigraphy in forensic investigation   | 39  |
| CROFT, D. J. & PYE, K. Colour theory and the evaluation of an instrumental method of measurement using geological samples for forensic applications  | 49  |
| BLOTT, S. J., CROFT, D. J., PYE, K., SAYE, S. E. & WILSON, H. E. Particle size analysis by laser diffraction   | 63  |
| SAYE, S. E. & PYE, K. Development of a coastal dune sediment database for England and Wales: forensic applications   | 75  |
| SUGITA, R. & MARUMO, Y. 'Unique' particles in soil evidence  | 97  |
| PYE, K. Forensic examination of rocks, sediments, soils and dusts using scanning electron microscopy and X-ray chemical microanalysis  | 103 |
| PIRRIE, D., BUTCHER, A. R., POWER, M. R., GOTTLIEB, P. & MILLER, G. L. Rapid quantitative mineral and phase analysis using automated scanning electron microscopy (QemSCAN); potential applications in forensic geoscience | 123 |
| GRAHAM, G. A., KEARSLEY, A. T., DROLSHAGEN, G., McDONNELL, J. A. M., WRIGHT, I. P. & GRADY, M. M. Mineralogy and microanalysis in the determination of cause of impact damage to spacecraft surfaces                       | 137 |
| HENDERSON, J. The archaeologist as a detective: scientific techniques and the investigation of past societies  | 147 |
| EDWARDS, H. G. M. Forensic applications of Raman spectroscopy to the non-destructive analysis of biomaterials and their degradation  | 159 |
| JARVIS, K. E., WILSON, H. E. & JAMES, S. L. Assessing element variability in small soil samples taken during forensic investigation  | 171 |
| PYE, K. & BLOTT, S. J. Comparison of soils and sediments using major and trace element data  | 183 |
| RAWLINS, B. G. & CAVE, M. Investigating multi-element soil geochemical signatures and their potential for use in forensic studies  | 197 |
| SMALL, I. F., ROWAN, J. S., FRANKS, S. W., WYATT, A. & DUCK, R. W. Bayesian sediment fingerprinting provides a robust tool for environmental forensic geoscience applications  | 207 |
| PYE, K. Isotope and trace element analysis of human teeth and bones for forensic purposes  | 215 |
| EVANS, J. A. & TATHAM, S. Defining 'local signature' in terms of Sr isotope composition using a tenth- to twelfth-century Anglo-Saxon population living on a Jurassic clay-carbonate terrain, Rutland, UK                  | 237 |
| TRUEMAN, C. N. Forensic geology of bone mineral: geochemical tracers for post-mortem movement of bone remains  | 249 |
| CROFT, D. J. & PYE, K. Stable carbon and nitrogen isotope variations in soils: forensic applications   | 257 |
| DAWSON, L. A., TOWERS, W., MAYES, R. W., CRAIG, J. VÄISÄNEN, R. K. & WATERHOUSE, E. C. The use of plant hydrocarbon signatures in characterizing soil organic matter   | 269 |
| CAMERON, N. G. The use of diatom analysis in forensic geoscience   | 277 |
| ISPHORDING, W. C. The right way and the wrong way of presenting statistical and geological evidence in a court of law (a little knowledge is a dangerous thing!)   | 281 |

|   |     |
|---|-----|
| ISPHORDING, W. C. Using geological information to identify apparent 'misrepresentation' of facts in a litigious situation | 289 |
| STAM, M. Soil as significant evidence in a sexual assault/attempted homicide case   | 295 |
| LEE, C. W. The nature of, and approaches to, teaching forensic geoscience on forensic science and earth science courses   | 301 |
| Index   | 313 |
