- Bedding-planes
 - slip, Buda Limestone 211–212
 - surface geometrical measures 196, 197–199
- Berea sandstone, geomechanical modelling 162
- Big Brushy Canyon moncline 204, 205, 206, 207, 208
 - extensional fault propagation folding 208–215
- binary tree method
 - explicit 79–81
 - implicit 81–83
- Black Ven, landslide outcrop analogues 52, 53, 53
- Blue Forest 3D seismic survey 138–155
 - deformation 139–141, 140
 - fracture density 144–145
 - fracture development 140–141
 - geomechanical model
 - comparison with velocity anisotropy 151–154
 - configuration 141–145
 - results 145–151
 - structure and evolution 139–141
- borehole image logs 16, 379
 - West Sole gas field 440–445
- Boundary REPresentation format (BREP) 406–407
- braided channel complex, Ringhorne Field 276, 278
- branch lines, fault editing 98, 99
- Bremstein fault complex 67
- Brent Group 25, 26, 27, 30, 32, 35, 37–38, 41, 45, 46, 58, 60, 61
 - production simulation model 221, 224–225, 230
 - seismic data 28, 33, 35, 38, 40, 42, 43, 60, 62
 - well correlation 38, 40
- Brent Field northern North Sea 221, 224
- Broom Formation 27, 30, 36, 40, 45, 46
- Bubnov–Galerkin finite element method 411–412
- Buda Limestone 204, 205, 206, 207, 208, 209, 210
 - Bedding-plane slip 211–212
 - layer extension 211
- Cabo Frio fault system, Santos Basin, passive margin extension 117, 118
- calcite, extensional veins, Buda Limestone 208–215
- calibration, dynamic, fracture network geometry 9, 386–391
- cambering 50, 51, 51
- Campos Basin, passive margin extension 117, 118
- Canyonlands, Utah, landslides 56
- capillary entry height method 226, 298–299
 - Rotliegende gas reservoirs 303–307
- cataclastite, fluid flow 301–302
- chalk
 - fluid flow 3
 - landslides 49
- Charlie fault, West Sole gas field 438, 446
- Clair reservoir, west of Shetland 2, 15
 - seismic anisotropy 7, 124–135
- clay
 - crystal preferred orientation 126–127 and permeability 10–11
- clay smear 219–220
 - Mount Messenger Formation 240, 242, 244, 245, 246
- Clay Smear Potential 10, 11, 223, 247, 248
- compartmentalization
 - fault 10–14, 230, 295, 296
 - Rotliegende gas reservoirs 295–307
 - West Sole gas field 438–440
- complex systems modelling platform (CSMP++) 407, 409, 413–416, 422, 426
- complexity, structural 3–4
- computer aided design, multi-phase fluid flow 406–407
- Congo Basin, passive margin extension 117, 118
- connectivity
 - dynamic 315–317, 328–330
 - fracture network geometry 377–378, 383–384
 - influence of faults 312
 - static 314
 - turbidites 311–312
 - modelling
 - faulted systems 320–332
 - unfaulted systems 313–320
- continental margins, passive rollover systems, analogue modelling 103–119
- sedimentary wedge, structural evolution 114, 115–116, 117, 118–119
- continuum percolation system 312
- core analysis
 - fracture network data 16, 376–379
 - West Sole gas field 440–445
- Cormorant Field, fault seal analysis 219–220
- Cormorant Formation 27, 30, 45
- Couette force 111
- Coulomb failure stress 144, 145, 148, 149, 155, 453–454, 457, 462
- Courant-Friedrich-Levy criterion 413
- creep, landslides 50, 72
- crest line 194, 197
- Cretaceous
 - base unconformity 28, 29, 30, 35, 38
 - AVOA 131, 133
 - Statfjord East Flank 58, 67, 70
- Critically stressed faults 17–18, 453, 457, 467, 470, 480
- crystal preferred orientation 124
 - anisotropy, Clair reservoir 125–135
- crystals, anisotropy 124, 126–127
- CSMP++ 407, 409, 413–416, 422, 426
- curvature 6, 9
 - analysis 185, 189–200
 - deformation prediction 188–195
 - description of folded surfaces 195–199
 - differential geometry 185, 186–188 and fracturing 392
 - Gaussian 186, 188, 196
- cylindricity, folded surfaces 188, 195–196, 197–198
- Δ-throw 260–261
- damage
 - drilling induced 16, 378, 379
 - West Sole gas field 437–438
 - evolution 176–182

- damage (*Continued*)
 mechanics 175–177
