INDEX 287

oxygen isotopic constraints on rnyonte genesis	Sr and Nd isotopes 218–221
diffusivity and fractionation factor	U-Pb geochronology 223, 224
coefficients 252	Tuolumne Intrusive Suite (TIS) 183–184
oxygen isotope problem 250–251	discussion
theoretical considerations 251–252	low-temperature mineral equilibrium 193
physical models 244	origin of chemical variation 193–195
magma reservoir model 244-246	significance of mapped plutonic
thermal models for rhyolite generation 246-250	units 198-199
spatial distribution patterns (SDPs) of crystals 137–138	source of isotopic variability 195-198
Stromboli volcano 33–34	spatial and temporal variations in
analytical methods 38	composition 193
bulk composition and glass chemistry 44-48	time-space patterns of geochemical
conclusions 59–62	variation 198
crystal size distribution and intrabubble	geological setting 184–186
distances 48–50	petrology
golden pumice 51	major- and trace-element geochemistry
scorias and lavas 50–51	188-190
geological setting and volcanological	methods 186
outline 34–35	mineral chemistry 186–188
eruptions, historic and current 36–38	radiogenic isotope geochemistry 191–193
geological map 36	thermobarometry 188
structural framework 35–36	summary 199
volcano 35	Summary 199
melt and magma viscosity 51–53	
petrography and mineral compositions 38–44	viscous dissipation in sill growth 71–72
	conclusions 79–80
petrology and phase relationships 53–54	implications for numerical modelling 78
plumbing system and magma chamber	implications for sill thickness prediction 78–79
shape 57–59, 60	near-tip region 74–75
P-T path summary 58	propagation regime 75–76
thermobarometric constraints 54–57	sill growth model 72–74
surface heat flux 18	sill growth regime 77–78
correlation with lava dome proportion 20, 22–23	volcanic arcs, first-order observations 15-16
	conclusions 27
Tamman-Vogel-Fulcher (TVF) 51-53	findings 20
Tindari-Letojanni fault system 34	<sup>238</sup> U/ <sup>230</sup> Th disequilibria 24
Tuolumne Batholith (TB) 203–204	correlation with suface heat flux 22–23
conclusions 230–231	geochronological evidence 25-26
discussion 223–225	magma migration in irregular arcs 26
compositional variation 226-230	reliability of GVP eruption style data 20–22
internal contacts 225–226	methodology
field relations and petrography	arcs with Holocene effusive eruptions 17
aplitic dykes 209	average viscosity determination 16
Cathedral Peak petrography 209–211	crustal thickness 18–19
interaction zones 211–214	plate convergence rate 19
ladder dykes 211	surface heat flux 18
magmatic fabrics 215–216	volcanic arc characterization 16–18
magmatic faults 215	results 19–20
microgranitoid enclaves 209	103dH3 17 20
potassium feldspar concentrations 214	
Schlieren 209	Williams expansion 73–74
geological setting 204–205	
method	xenocrysts 134, 135
