Page numbers in *italic* refer to Figures. Page numbers in **bold** refer to Tables.

- accretionary orogen 165, 166
active faulting, Lower Rhine Graben 1
 analytical techniques 132–135, 140–143
 geological analysis 135–136
 geomorphology and regional setting 127–132
 geophysical analysis 136–140
active faulting, Upper Rhine Graben 149, 157, 158
active faults, Mongolia 188, 189, 208
 Egiin Davaa rupture 190
 Ejina Basin 214
aeolian sediments 219, 224
aftershock 7, 23, 26, 75, 93
 Chilik earthquake 58, 69
 Virginian earthquake 101, 109, 110, 114–116
age, Egiin Davaa rupture 195–204
age, soft-sediment deformation 221–224, 226
age, surface exposure 197, 205–207
Alaska 1964 earthquake 56
alluvial fan 191, 192, 194, 196, 209
 Ejina Basin 214
Almaty earthquakes 233, 234
 1887 magnitude 7.3 41
Amazon Basin 76, 78, 88
Amazon craton 74, 79–80
anthropogenic overprint 5, 128, 132, 135–136,
 141–143
Ar/Ar dating 194, 207, 208
archive maintenance 3
Arkansas swarm 101–102, 116
aseismic creep 131, 157, 158
Atlantic Coastal Plain, groundwater 96–97
Atlantic opening 5, 6
Australia, intraplate seismicity 7, 8, 163–181
 historical 164

Baffin 1933 earthquake, M7.4 23
Baikal Rift 3
Baisoorun 1990 earthquake, M6.3 43
Balochistan 2013 earthquake, M6.3 5
Barmah Fan 168, 169
 age 171–172
Barmah palaeolake 176, 177
Barmah Sandhills 171
base flow estimate 96
Basel 1356 earthquake M6.5 6, 19, 20, 149
 aftershock 25
Basin and Range Province, USA 3, 200, 202
 earthquake depth 208
Bayesian posterior probability 30–34,
 35–37, 38
¹⁰Be surface exposure age, moraine 197,
 205–207

Belovodsk/oe 1885 earthquake, M6.9 41, 233
Berlin magnetogram observations 52, 57
Bhuj 2001 earthquake, M7.7 59, 73
Biot slow wave 92, 93, 99, 106–107, 114–115
Bor Hyarhan rupture 195, 205
Bor Hyarhan scarp 199, 200
Borah Peak 1983 earthquake, M6.9 188
Borborema Province 76, 79, 87, 88
Brazil, continental margin 74
British magnetogram observations 52, 54–57, 60
brittle deformation, seismites 219
brittle fault 93, 110, 115, 179
Bronze Age, palaeoseismicity 122
burial mounds, prehistoric 196, 200, 201,
 202, 207

Cadell Fault scarp 166, 168–171
 sequence stratigraphy 174–176
Cadell Fault, Australia
 case study 165–171
 geochronology 165, 171–174
 rupture behaviour 176–179
 stable continental region 163–165
 structure and stratigraphy 174–176
Canada, intraplate seismicity 19, 20
 earthquake hazard maps 22, 23
Canterbury (New Zealand) 2010 earthquake,
 M7.1 3, 128
cataclastic deformation
 in sediments 7, 147–148, 152–154,
 156–159
Central Asia
 1885–1911 earthquakes 233, 234
 1992–2015 earthquakes **69**

 seismology and palaeoseismology
 continuity and discontinuity 119–121
 methodology 121–124
 self-organized critical state 92, 93, 102, 103, 115
 SEM image, grain spalling 153, 154, 155
 sequence stratigraphy, Cadell scarp area 174–176
 Shaanxi 1556 earthquake, M c.8 73
 SHARE, 2013 earthquake hazard map 14, 15, 16, 19
 Shillong 1897 earthquake 54
 Shuttle Radar Tomography Mission data 167–169
 Chon Kemin 237
 Egiin Davaa rupture 190
 Mongolia 188
 slickenline 152, 153, 157
 slip and fault initiation 204, 205–207
 slip rate 1, 6, 8, 228
 Cadell Fault 164, 177, 178, 180
 Egiin Davaa rupture 187, 189, 190, 193, 205–209
 Quaternary 233
 Upper Rhine Graben 147, 158
 slip, depth range 252
 slope diffusion rate 208
 age 198, 201–204
 slowly deforming regions, types 3
 soft-sediment deformation 8
 age 221–224, 226
 characteristics 217
 formation 219
 structures 216–221, 220–221
 soil creep 131
 soil mechanics 157
 source parameters
 Chilik 1889 earthquake 45–47, 60, **61–68**
 South America, intraplate seismicity 73–88
 standing stones 196
 statistical analysis 39
 Central Asian earthquakes 29–40
 strain accumulation 1, 2, 23, 163, 180, 190
 stress field 74, 87, 157, 176, 180
 Australia 165
 striation 204
 structural damage 235
 subduction 180
 subsidence 227
 Ejina Basin 214, 216
 mining induced 5, 131
 surface exposure age 197, 205–207
 surface rupture *see* rupture
 swarm (earthquake) 96, 100–103, 116
 Swedish Palaeoseismic Catalogue 121
 Swist Fault 131, 135
 Tangshan 1976 earthquake, M7.8 25
 Tangshan, aftershocks 25
 tectonic landforms 150, 238, **239–242**
 tectonic loading 1, 2, 23, 24
 Tennessee, USA seismic zone 98
 thermo-luminescence dating 149
 thick-skinned deformation 58
 Tibetan Plateau 213, 215, 224
 Tien Shan Mountains 3, 5, 58
 earthquakes 41, 42, 59, 233–252
 seismicity 6–7
 Tienshu Fault 224, 225, 226, 227, 228
 Tohoku 2011 earthquake, M9.1 13, 29
 topographic mapping 236, 246–247
 topography 169
 and seismic activity 77–78, 84–88, 165
 Ejina Basin, Mongolia 189, 190, 194–195
 Kebin, Kyrgyzstan 243–247
 Lower Rhine Graben 128, 130, 133, 135, 141
 Upper Rhine Graben 148, 150
 Vosges Mountains 158
 topography and groundwater 95
 topography, Brazil 75
 and intraplate seismicity 77–78, 84–88
 Transbrasiliano Lineament 78–79, 81
 transpression 224
 trench analysis 172
 Egiin Fault scarp 189, 193–195, 196–200, 202, 207
 Lower Rhine Graben 135, 139, 140–143, 149
 triggering mechanism 92, 93–95
 tsunami (Holocene) 121–122, **123**
 Ubaye swarm, France 116
 hydroseismicity 103
 underplating 190, 214
 unloading system 179
 Untermaubach site 129, 130, 131–132, 133
 active fault investigation 136–143
 uplift history, Cadell Fault 171–174, 176–177
 Upper Rhine Graben 19–20
 aftershocks 25
 seismotectonic slip 147–149
 Utrecht, magnetograph observations 54
 varve, palaeoseismicity 121–122
 velocity
 and intraplate seismicity 84–88

- velocity anomaly 81–83, 84
- velocity, plate movement 188
- Verny
 - aftershock 69
 - Chilik earthquake 60
- Verny 1887 earthquake, M7.3 to 7.4 41, 233, 234, 251
- Verviers 1692 earthquake, M c.6.3 20
- Vienna Basin, aftershocks 25
- Viking shoreline 122–123
- Virginia, USA intraplate seismic zone 91–116
 - 1897 earthquake, M6.5 to 6.8 98
 - 2010 earthquake M3.2 113–114
 - 2011 earthquake M5.7 96
 - aftershock 101, 109, 110, 114–116
 - hydroseismicity 104–116
- Vogtland, Bohemia seismic zone 102–103
- Vosges Mountains 151, 156
 - fault scarp 149
 - Riedseltz Fault 158
- Wallace-type behaviour 178
- water escape structures 218, 219, 220, 221
- Wenchuan (China) 2008 earthquake, M7.9 13
- Western Juyanze Palaeolake Basin 216, 224, 226–228
 - seismites 217–219
- Wilhelmshaven, historical records 43, 57–59
 - Rebeur-Paschwitz records 47–52, 53
- world-wide earthquakes 4, 95
- XRD analysis 154, 155
- yardang 216, 217, 218, 224
- yield/failure envelope 157
- Yinchuan 1739 earthquake 188
- Yutian, Tibet 2014 earthquake, M7.1 188
- Zhalanash–Tyup 1978 earthquake, M6.9 43, 45, 58, 59, 60
