THE GEOLOGICAL SOCIETY

The Society was founded in 1807 as the Geological Society of London and is the oldest geological society in the world. It received its Royal Charter in 1825 for the purpose of 'investigating the mineral structure of the Earth'. The Society is Britain's national learned society for geology with a Fellowship of 6965 (1991). It has countrywide coverage and approximately 1000 members reside overseas. The society is responsible for all aspects of the geological sciences including professional matters. The Society has its own publishing house which produces the Society's international journals, books and maps, and which acts as the European distributor for publications of the American Association of Petroleum Geologists.

Fellowship is open to those holding a recognized honours degree in geology or a cognate subject and who have at least two years relevant postgraduate experience, or who have not less than six years relevant experience in geology or a cognate subject. A Fellow who has not less than five years relevant postgraduate experience in the practice of geology may apply for validation and, subject to approval, may be able to use the designatory letters C. Geol (Chartered Geologist).

Further information about the Society is available from the Membership Manager, The Geological Society, Burlington House, Piccadilly, London W1V 0JU, UK.

Foreword

The inspiration for this volume came from numerous discussions with our colleagues in Aberdeen University and industry about the problems of elucidating the geology of hydrocarbon reservoirs formed of fluvial and aeolian sediments. As we have spent much of our working lives studying such rocks, and attempting to model them in the sub-surface, we felt we had a large network of contacts who could assist in documenting the state-of-the-art. The network has increased in size as a result of this exercise, and to them all we extend profound thanks for their help, however small.

Financial assistance towards the costs of this publication has been most gratefully received from:

Amoco (UK) Exploration Company
ARCO British Limited
Bisset's Bookshop, Aberdeen
BP Exploration
Clyde Petroleum plc
Deminex UK Oil and Gas Limited
Enterprise Oil plc

Esso Petroleum Company Limited
Halliburton Geo-Consultants Limited
The Petroleum Science and Technology Institute
Phillips Petroleum Co. UK Limited
Stratamodel Inc.
University of Aberdeen

As with all ventures of this type, scientific standards are maintained by the use of independent reviewers. In this case, we are extremely grateful to the 52 industrial and academic scientists who gave of their time freely, and unpaid. Without exception, the authors found the reviews constructive and helpful, and have improved their contributions as a result.

Colin P. North
Jeremy Prosser
