The Geological Society
London

THE GEOLOGICAL SOCIETY

The Society was founded in 1807 as The Geological Society of London and is the oldest geological society in the world. It received its Royal Charter in 1825 for the purpose of 'investigating the mineral structure of the Earth'. The Society is Britain's national society for geology with a membership of 7500. It has countrywide coverage and approximately 1000 members reside overseas. The Society is responsible for all aspects of the geological sciences including professional matters. The Society has its own publishing house, which produces the Society's international journals, books and maps, and which acts as the European distributor for publications of the American Association of Petroleum Geologists, SEPM and the Geological Society of America.

Fellowship is open to those holding a recognized honours degree in geology or cognate subject and who have at least two years' relevant postgraduate experience, or who have not less than six years' relevant experience in geology or a cognate subject. A Fellow who has not less than five years' relevant postgraduate experience in the practice of geology may apply for validation and, subject to approval, may be able to use the designatory letters C. Geol (Chartered Geologist).

Further information about the Society is available from the Membership Manager, The Geological Society, Burlington House, Piccadilly, London W1V 0JU, UK. The Society is a Registered Charity, No. 210161.

Contents

| | |
|--|-----|
| AMEEN, M. S. Introduction | 1 |
| Part 1: Fractographic studies | |
| Methods of observation, data collection and processing/quantitative fractography | |
| AYDAN, Ö. & SHIMIZU, Y. Surface morphology characteristics of rock discontinuities with particular reference to their genesis | 11 |
| JESSELL, M. W., COX, S. J. D., SCHWARZE, P. & POWER, W. L. The anisotropy of surface roughness measured using a digital photogrammetric technique | 27 |
| Application of fractography to fracture analysis from core | |
| BANKWITZ, P. & BANKWITZ, E. Fractographic features on joints of KTB drill cores (Bavaria, Germany) | 39 |
| Fractography applied to the analysis of experimentally produced fractures in rocks and non-rocks | |
| KULANDER, B. R. & DEAN, S. L. Observations on fractography with laboratory experiments for geologists | 59 |
| BUTENUTH, C. & DE FREITAS, M. H. The character of rock surfaces formed in Mode I | 83 |
| Fractography applied to fracture analysis in field studies aimed at understanding regional tectonics | |
| AMEEN, M. S. Fractography and fracture characterization in the Permo-Triassic sandstones and the Lower Palaeozoic Basement, West Cumbria, UK | 97 |
| AMEEN, M. S. Fracture characterization in the Chalk and the evolution of the Thanet monocline, Kent, southern England | 149 |
| ROBERTS, J. C. Fracture surface markings in Liassic limestone at Lavernock Point, South Wales | 175 |
| Part 2: Non-fractographic studies | |
| Miscellaneous studies of fractures | |
| COSGROVE, J. W. The expression of hydraulic fracturing in rocks and sediments | 187 |
| GOODWIN, A. M. Spatial change in joint geometry in the Chalk of eastern England | 197 |
| GROSS, M. R., FISCHER, M. P., ENGELDER, T. & GREENFIELD, R. J. Factors controlling joint spacing in interbedded sedimentary rocks: integrating numerical models with field observations from the Monterey Formation, USA | 215 |
| Index | 235 |
